

README

T24/CBS Mock Server

This mock simulates a CBS/T24 backend with a configurable TPS capacity.

Default behavior:

- Capacity: 35 TPS
- Normal response time: around 1s , endpoint-specific profiles adjust this.
- When traffic goes above 35 TPS , response delay increases up to 10s .
- By default it does not fail requests; it delays them. You can configure failure rate if needed.

The mock uses only Python standard library.

For Ubuntu VPS/Docker deployment, see:

`cbs_mock/run_on_ubuntu.md`

Run

```
python cbs_mock\mock_t24_cbs.py
```

Server:

`http://127.0.0.1:8780`

Browser UI:

`http://127.0.0.1:8780/__mock/ui`

From this page you can change:

- Capacity TPS
- default normal/max latency
- overload exponent
- error rate over capacity
- endpoint-profile normal/max latency values

Changes apply immediately for new requests; no restart is needed.

Stats endpoint:

`http://127.0.0.1:8780/__mock/stats`

Config endpoint:

```
http://127.0.0.1:8780/__mock/config
```

Runtime config update:

```
curl -X POST "http://127.0.0.1:8780/__mock/config" -H "Content-Type: application/json" -d "{\"capacity_tps\":20,\"normal_latency_ms\":1500,\"max_latency_ms\":10000}"
```

Reset stats:

```
http://127.0.0.1:8780/__mock/reset
```

Example Calls

```
curl "http://127.0.0.1:8780/esb/DFCC_OB_NEW/v1/OB_SA_details?CIF_NO=100001"
```

```
curl "http://127.0.0.1:8780/esb/DFCC_OB_NEW/v1/OB_LOAN_details?CIF_NO=100001"
```

```
curl -X POST "http://127.0.0.1:8780/esb/transaction/v1/fundTransfer" -H "Content-Type: application/json" -d "{\"amount\":\"100.00\"}"
```

The response includes headers:

X-Mock-Current-TPS

X-Mock-Capacity-TPS

X-Mock-Delay-Ms

X-Mock-Over-Capacity

CBS/T24 Paths Seen in Logs

The mock accepts any path, but these high-volume backend paths were seen in the logs and have profile-specific latency behavior:

```
GET /esb/DFCC_OB_NEW/v1/OB_SA_details
GET /esb/DFCC_OB_NEW/v1/OB_CA_details
GET /esb/DFCC_OB_NEW/v1/OB_FD_details
GET /esb/DFCC_OB_NEW/v1/OB_LOAN_details
GET /esb/DFCC_OB_NEW/v1/OB_CUST_view
GET /esb/DFCC_OB_NEW/v1/OB_CASA_view
GET /t24_account_statement_api/v1/getAccMiniStatement
POST /esb/transaction/v1/fundTransfer
POST /dfcc_ob_transactions/v1/createDfccFundsTransfer
POST /ob_qrpayment/v1/OB_postCeftInwdRevampQrPymnt
POST /esb/ob_account_opening/v1/savingsAccountRupeee
POST /esb/ob_account_opening/v1/acctPayments
POST /esb/ob_fdopen/v1/maturityDepositRupeee
POST /esb/ob_fdopen/v1/interestPayoutDepositRupeee
```

The main CBS paths above return synthetic payloads shaped for the Spider service code paths we inspected:

SavingsAccountDetails_CBS008

CurrentAccountDetails_CBS006

```
FixedDepositDetails_CBS010  
LoanDetails_CBS020  
AccountDetails_CBS002  
CustomerDetailsCID_CBS003  
TransactionListing_CBS017  
FundTransfer_CBS011
```

This is enough for latency/load/timeout benchmarking. It is not a full T24 simulator for every business field and every edge case.

Load Test

Run below capacity:

```
python cbs_mock\load_test_mock.py --tps 20 --duration 30 --timeout 15
```

Run above the T24 capacity:

```
python cbs_mock\load_test_mock.py --tps 50 --duration 30 --timeout 15
```

Expected behavior:

- Around 20 TPS : response times should stay near normal profile values.
- Above 35 TPS : mock response times should increase toward 10s .

Configuration

Edit:

```
cbs_mock/mock_config.json
```

Important fields:

```
{  
  "capacity_tps": 35,  
  "normal_latency_ms": 1000,  
  "max_latency_ms": 10000,  
  "error_rate_over_capacity": 0.0  
}
```

If you want overload to return errors as well as delays, set:

```
"error_rate_over_capacity": 0.05
```

That means roughly 5% of over-capacity requests will return HTTP 503 .

Spider Integration Notes

Point Spider CBS endpoint configuration to this mock host/port for local/load-test environments.

If Spider expects the original hostnames, either:

- change Spider endpoint configs to `http://127.0.0.1:8780/...`, or
- route those hostnames to the mock through a test DNS/hosts/proxy setup.

Do not copy real CBS response payloads into this mock. The included responses are synthetic.
